**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 14 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang (US 5814915) in view level of ordinary skills of a worker in the art.

Wang discloses an assembly for transferring current, the assembly comprising: a plurality of electrically conductive brushes (21) for supplying, each of the electrically conductive brushes being coupled through an electrical connection to adjacent ones of the electrically conductive brushes through a common electrical interface (24); at least one electrically conductive lead coupled to the common electrical interface; a plurality of inductors (44), each situated on a respective one of the electrical connections (19) to connect to winding lead. Wang substantially discloses the claimed invention, except for the limitations of the brushes connected to the slip ring.

However, those skilled in the art would realize that in the brush-type electrical machine, electrically conductive brushes connected to slip rings for supplying current to the slip rings are well known in the art. Slip ring is an essential part of the current collecting structure of the brush-type electrical machine.

Thus, it would have been obvious to one skilled in the art at the time the invention was made to modify Wang's transferring current assembly with at least one slip ring because slip ring is an essential part of a current collecting assembly of the brush-type dynamoelectric machine.

Regarding claim 36 which recites method claimed language that is a counter part of the apparatus claims, once the device is disclosed in detail, an artisan would be able to derive a method of forming the same.

***Allowable Subject Matter***

**Claims 15-20, 37-40** would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
